WALL MASTERS

OUR
GREEN
JOURNEY

OUR COMMITMENT FOR A BETTER FUTURE

The resources of
our planet are not
infinite.

Caring for them means respecting a good that belongs to all of us and to future generations. Exactly for this reason, TEXAM commits every day with small gestures to limit its environmental impact.

We would like to explain what we already do today and what we like to improve to have a better future for our planet and for all of us.

present nature.

- Our wallpapers are produced on **tnt paper or natural fabrics** such as: cotton canvas, linen fabrics (sustainable sources under european legislation). **None** of our products are **pvc or plastic** based.
- Texam uses **eco-sustainable products**: our **resins** are all **water-based** and the pigments we use are of **100% natural**.
- The **fumes** produced by the ovens of our machinery are **purified** by activated carbon filters, no polutes air goes to nature from us, just **clean air**.
- All the mixed **water** with dyes and resing are kept in a large tank and once a week a company specialised in filtering comes to collect it and **purify** them.

present nature.

- The **inks** used for digital printing are all **eco-sustainable**, as they do not contain solvents. Our supplier collects the exhausted cartridges and recycles them.
- Texam offers a **cutting service** to customers, that allows us to save on materials and provide only the necessary quantity to be used and **reducing waste** to a minimum.
- In the year 2020 we can count on having reduced our **environmental** impact; we have created **multimedia contents** for the sale of our products, so as not to have to travel, take planes, use trains and buses.

2021 nature.

Our commitment to deliver our products in a sustainable way:

- Binders
-
- No books
-
- Smaller samples with more information

Smart working / network support and presentations

- Videos present each collection in the market
-
- Less travelling to visit our clients globally.
-
- Costant video communication support to clients and client's clients.
-
- Less shows and more specific presentations to potential and existing clients.

future nature.

- In a very close **future**, we are organizing to place **solar panels** on the whole roof of our building to **self-produce** electricity, to help the company's needs
- At the beginning of **2022** we will install a water purifier that will clean all the water from our production systems, to be able to put it **clean** and without any kind of residues.
- We are testing the use of recycled paper as a support to our wall coverings, and to use a fully **recycled or recyclable packaging**, to reduce the consumption of plastic to zero. From the **second half of 2021**, our packaging should become all eco-friendly.

A full commitment to zero impact paper production before 2022.

This year we have taken the decision, given our consumption of paper, to adopt tree forests to reduce our environmental impact. We will fully give back to nature the amount of paper used in our product by 2022.

Green collections by Texam.

REEF

A unique collection in its kind, made in **real quartz** on TNT with natural and **non-chemical pigments**, inspired by marine beauties

ID

The ID collection is made on **TNT paper** with eco-sustainable **solvent-free digital inks**, the design is inspired by nature in every form.

The transition tropic design is 100% eco-sustainable: solvent-free digital printing on **pure cotton canvas** laminated with paper.

RAW

This collection is green in every aspect: designs that represent the most authentic **nature**, paper backing and **pure cotton canvas**, **solvent-free inks**.

AMBIENT

The ambient collection enclosures many subjects inspired by nature, sound colors and a minimal and elegant design.

DUET

New 2021 collection Duet is totally **eco-sustainable**, made in **linen** and paper, for a minimal and **ecofriendly** design.
